SUSTAINABLE WINE

Sustainable wine, – wine with consideration. Crowne Plaza is a sustainable hotel and therefore we also made a wine list consisting of a minimum of 60% sustainable commerce wines. Sustainable wine may be produced in different ways, here is a brief introduction to the different cultivation and theories, all of which work according to the environment.

ORGANIC WINE: (ORG)
This means that the grapes are grown organically and without the use of synthetic fertilizers and synthetic pesticides produced. During the basement work, the wine is treated gently with respect to filtering and finishing.

NATURAL WINE: (NAT)
“Natural Wine” and “Wild Wine” in addition to being made from organically grown grapes, not containing added fertilizers and pesticides not added sulfites, i.e. wine brand additives. The wine is preserved exclusively with sulfur that naturally sits on the grapes.

BIO DYNAMIC WINES: (BIO)
Biodynamic about wine grown in accordance with a holistic ecosystem under three general requirements: organic with compost const cow manure and silica. The work in the fields and basement is organized by astronomical, biodynamic calendar controlled which includes phases of the moon.

SUSTAINABLE VINE: (SUS)
Called wine sustainability, it must be able to document the representation of one or more ethnic aspects when working with wine. These could consider: Working in the field and winery, reduced use of pesticides, focusing on water, less energy consumption, etc.
